

3 PHASE SUBMERSIBLE PUMP CONTROL PANEL (PCP 1)

Description

- It protects the motor from single phasing.
- It protects and guards the motor from over loading with its most accurate Thermal bimetallic over load relay.
- It also protects the submersible pump set motor by tripping instantly when the Water level decreases below the two dry run probe points.
- It is provided with an amps meter to read the exact current drawn by the motor and an volt meter with a push-to-on button.
- It is also provided with three individual phase indication neon lamps to make the user know which one of these phases have failed.
- A separate auto start can also be provided on demand, which is capable of restarting the panel automatically once the power in all the three phases resumes back.
